		1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.							
		2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.							
		3. Tolerance : includes set up tolerance, line regulation and load regulation.							
		4. Derating may be needed under low input voltage. Please check the static characteristics for more details.							
		5. 33% Duty cycle maximum within every 30 seconds. Average output power should not exceed the rated power.							
		6. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 360mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com)							
		7. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).
